THE TSUNAMI REFRAME WORKSHEET 1 The Situation Read only A massive earthquake in the Indian Ocean triggered a tsunami that completely destroyed communities along the entire coastlines of many countries, killed around 200,000 people and left countless others alone, destitute, injured,

vulnerable to disease, exploitation and poverty

Performance-Based Tsunami Engineering via a Web-Based GIS ...

smaller buildings were in the “tsunami shadow” of the larger buildings) This spatial arrangement resulted in a strong flow jet formation in the gap between the two large buildings. The resulting complete destruction of buildings in the path of the jet formation can be observed in the figure. Obviously, the maximum inundation depths

SECTION 4. RISK ASSESSMENT

Unlike storm waves, tsunami waves may be very large in embayments, actually experiencing amplification in long funnel-shaped bays. However, shorelines protected by reefs typically do not sustain extensive damage from tsunamis as the reefs disperse the wave energy. Islands in a group may “shadow” one another reducing the tsunami effect.
