Respiration

Cellular respiration refers to a set of processes and reactions taking place in the cells to convert the energy that they obtain from nutrients into ATP. In the process, some waste products are released. Cellular respiration involves catabolic reactions in which large molecules are broken down to smaller molecules releasing energy in the process. The energy is released when the weak high-energy bonds in the large molecules are replaced by stronger bonds in the smaller molecules.

Cellular Respiration Quizzes & Trivia

When we eat carbohydrates (pasta, rice, bread, potatoes) our body breaks them down to glucose. Glucose reacts with the oxygen that we breathe in and energy is released. This process is called respiration. The chemical equation for respiration is shown below: oxygen + glucose → carbon dioxide + water + ENERGY.
