If you hear a constant whining noise, accompanied by a slip in the gears as the transmission automatically shifts, it points to low transmission fluids. Without the proper fluid level, the pump has to push air through the transmission, which causes the noise and produces the hesitation or slippage.

### How to Diagnose Transmission Noises | It Still Runs

Transmission pumps are driven directly from the engine through the torque converter. The torque converter housing is mechanically attached to the engine's crankshaft causing the pump to operate whenever the engine is running. It's why a worn or faulty pump makes a whining noise in all gears, including park and neutral.
