Latitude And Longitude Finder World

The latitude is specified by degrees, starting from 0° and ending up with 90° to both sides of the equator, making latitude Northern and Southern. The equator is the line with 0° latitude. The longitude has the symbol of lambda and is another angular coordinate defining the position of a point on a surface of earth.

Latitude and Longitude Finder on Map Get Coordinates

Find Latitude and Longitude. Address field - enter an address, city, state, place name, postal code or any other name for a location into this field, select "North America" or "Europe" from the region menu, and then click the find button to retrieve its latitude-longitude coordinate pair.

Find Latitude and Longitude

If you divide the circumference of the earth (approximately 25,000 miles) by 360 degrees, the distance on the earth's surface for each one degree of latitude or longitude is just over 69 miles, or 111 km. Note: As you move north or south of the equator, the distance between the lines of longitude gets shorter until they actually meet at the poles.

Latitude And Longitude - Facts and Map - WorldAtlas.com
